

Pragma

Internal Business + Sales Playbook

For outreach and pre-sales only. Not a client-facing proposal.

Updated 07 August 2026 | 26pragmalabs@gmail.com

Covers ALL Pragma services (websites, ConnectOS, NestOS, Pragma Flow AI tools, portal, retainers), how deals actually run, pricing guidance, demos, and a full plain-English glossary.

ONE-LINE PITCH: Pragma builds first-party software for real-ops businesses - marketing sites that convert, admin systems that capture leads, recruitment ops platforms, and domain AI tools (assistant, classification support, digests, client portals) that do not invent liability on regulated topics.

Read order for a new hire: (1) How Pragma makes money (2) Service map (3) Deep-dives on any product you will sell (4) Deal process (5) Pricing cheat sheet (6) Glossary before any technical call (7) Talk tracks.

1. What Pragma is (business model)

Pragma is a product-building studio (custom software + productized modules). We are NOT a pure staffing agency, NOT a pure design agency, and NOT a multi-tenant SaaS company that keeps all client data on a secret platform forever. We design, ship, and hand over systems the client (or their IT) can own.

How we make money

- One-time build fees (majority): website, admin platform modules, AI features, ops portals.
- Optional monthly retainer: support, small changes, content ops, hosting help.
- Pass-through costs: AI API credits, cloud host (Render/Neon etc.), special OCR/WhatsApp APIs - client pays actuals or we invoice cost.
- Trials: sometimes a small trial access fee (example NestOS trial) before full product sale.

Who we sell to (ideal client)

- Ops-heavy SMEs / mid-market in India: recruitment/staffing, logistics & CHA customs, specialist professional brands.
- They have WhatsApp chaos, brochure website, or Excel as the 'system of record'.
- They care about brand + compliance, not toy AI demos.
- Someone can own production (their IT, founder, or willing paid host accounts).

Who is a waste of time

- Want free ChatGPT pasted on site with no ownership / no payment.
- Want ERP/TMS/full enterprise RFP for agency-size budget.
- Want us to invent binding legal/duty/classification as a product promise.
- No decision maker after 2 calls and endless 'just one more demo for cousin'.

2. Full service map (memorize this table)

Every pitch maps to one or more of these product lines:

- A. Marketing website rebuild/build - public brand site that converts.
- B. ConnectOS - website lead admin inbox (forms -> database -> dashboard).
- C. NestOS - full recruitment / staffing company operating system (internal).
- D. Pragma Flow - modular AI + desk tools for specialized ops (CHA/logistics package fully built; pattern resells).
- E. Client tracking portal - public track + client login + staff ops console.
- F. Deploy / hosting setup + handoff - make it live + keep it alive.
- G. Ongoing tech retainer - bug fixes, small updates, monitoring.
- H. Internal only for now: PragmaOS - Pragma's own studio OS foundation (NOT sold externally yet).

IMPORTANT: Neo Logistics is ONE client case for line D+E. ConnectorsHR / HummingBrains are cases for A+B+C. Do not talk as if Pragma only sells 'the Neo bot'. Sell the PRODUCT LINE that fits the buyer's industry.

3. Service deep-dive A - Marketing websites

What it is

We rebuild or design a modern company website for the client's brand (examples: ConnectorsHR recruitment site, Neo Logistics marketing site rebuild). Pages, mobile layout, contact forms, SEO basics, performance. Content may be migrated from old site or written with client sign-off.

Business problem it solves

- Old WordPress/static brochure that confuses employers/candidates or importers.
- Forms open someone's personal email and vanish.
- Brand looks weaker than competitors.

Typical pieces

- Public pages: Home, About, Services, Industries, Contact, careers / job-hunter variants.
- Forms that POST to an API (ConnectOS or similar) instead of mailto-only.
- Admin path if bundled with ConnectOS.
- Deploy to Cloudflare Pages / Netlify style frontend + separate API host.

Technical wording you may hear

- Frontend: What the visitor sees in the browser.
- SPA: Single-page application - site changes pages without full reloads (React apps often work this way).
- React / Vite / Next.js: Tools for building modern web frontends. You don't need to code them - just know 'modern JS website stack'.
- SEO: Search engine optimization - titles, meta, structure so Google can find the business.
- DNS: Domain name settings that point connectorshr.com or neologistics.org to hosting.

Pricing guidance (website only)

Reference quote (ConnectorsHR website share)

Part of Rs 40k package: website ~ Rs 28k

Typical range (standalone rebuild)

Rs 25,000 - 1,50,000+

Price rises with pages, custom design depth, content writing volume, multi-language, CMS, animations. ConnectorsHR was a relationship-efficient package, NOT the market ceil for every brand.

How you sell it

- Lead with conversion and brand trust, not 'we use React'.
- Always pair website with ConnectOS when forms matter - otherwise leads die in email.
- Ask who owns domain login - biggest deployment blocker.

4. Service deep-dive B - ConnectOS

What it is (plain English)

ConnectOS is the back-office for a company website. When someone fills a form (job seeker CV, employer hire request, contact, careers), it is saved in a database and shows in a password-protected admin inbox with filters, search, CV download, and CSV export. It is NOT a full recruiter ATS and NOT NestOS.

Reference client

ConnectorsHR (recruitment brand). Prod shape: public website + admin at /admin.

What ConnectOS does

- Receive multi-type form submissions via API.
- Store name, email, phone, company, message, source page, CV file.
- Spam friction (e.g. honeypot fields).
- Admin login (JWT session).
- Filter types: Candidate / Employer / Careers / Contact.
- CSV export for Excel/CRM.
- Optional email notify when a lead lands (SMTP / Resend).

What ConnectOS does NOT do

- No interview pipeline stages.
- No Naukri Resdex sourcing.
- No call logging, end-of-day sign-out, multi-role RBAC for whole staff (NestOS).

- No MRR/invoicing CRM depth.

Pricing guidance

Reference (ConnectOS share of CHR quote)

~ Rs 12,000 of Rs 40,000 package

Packaged website + ConnectOS (CHR Option 1)

Rs 40,000 one-time

CHR Option 2

Rs 25,000 up front + Rs 4,000/month retainer

Typical production hosting (not our fee)

~ \$7-26/month services (Render, DB, etc.)

Sales line

Website alone generates vanity traffic. ConnectOS makes traffic into a recoverable lead pipeline. If the buyer loses CVs in WhatsApp, this is the product.

5. Service deep-dive C - NestOS

What it is (plain English)

NestOS is an internal recruitment / staffing company operating system. Built for HummingBrains / RTS-style firms that sell (1) staff augmentation, (2) talent acquisition placements, and (3) Interview-as-a-Service (IaaS). Team logs in with roles. It is NOT the public marketing website.

Who uses which role

- Recruiter: Daily sourcing, candidates, outreach, Resdex helper, interviews, activity log, end day.
- Manager: Assigns interviews, team visibility, review operations, broader dashboards.
- Sales: Leads, clients, renewals, revenue/invoices.
- Admin: Everything + sign-out reviews + settings + audit.

Major modules (explain without fear)

- Talent Hub: Master list of candidates - profiles, resumes, documents.
- OCR / PDF parse: Upload many CVs; system extracts text/fields (Azure Document Intelligence when configured; plain text PDFs work without).
- Naukri Resdex helper: Chrome extension; Naukri has no public API so recruiters still use Resdex; helper sends shortlisted CVs into NestOS without retyping.
- Activity log: Verified calls / WhatsApp / email / LinkedIn outreach entries.
- End of day / sign-out: Recruiter closes day with summary; manager can review unlogged work.
- Workspace + tasks: Internal tasks/messages so work is not stuck in email chains.
- IaaS interviews: Interview-as-a-Service workflow - run client-supplied candidates through structured interview flow + faster report style capture.
- Team and audit: Who is online / in interview / utilization-style tracking.
- Clients / Leads / Revenue: CRM layer - pipeline health, invoices, MRR style views.
- Analytics: Pipeline, sourcing, outreach, team, IaaS tabs - based on verified activity.
- RBAC: Role-based access control - each login only sees/does what their job needs.

Business lines NestOS maps to (HummingBrains language)

- Staff augmentation: Place contractors at client sites; bill monthly.
- Talent acquisition (TA): Permanent hire search; placement fee.
- IaaS: Client sends candidates; we interview + deliver assessment report.

Honest status language (use this)

NestOS has been demoed and trialled with HummingBrains / Mani-class stakeholders. It is a serious product surface with multi-user trial packaging. Always clarify trial vs full production handover vs future ATS connectors.

Trial commercial example

NestOS multi-user trial access fee (example invoice)

Rs 12,999

That fee covers trial hosting footprint, OCR/API-ish costs, helper distribute - it is NOT the full NestOS product price. Full production sale is phased and higher - always re-scope with founder before quoting full NestOS.

How NestOS relates to ConnectOS

ConnectOS = public site lead capture for ConnectorsHR brand.

NestOS = day-to-day ops OS for staffing company.

Some patterns shared (activity, analytics thinking). Different products and buyers.

6. Service deep-dive D - Pragma Flow (AI + desk tools)

What the product line is

Pragma Flow is a modular package of first-party AI and desk tools for specialist operations. The flagship shipped build is for licensed CHA / logistics (Neo Logistics class). You sell the MODULES, then name them for the client (Neo Assist, etc.).

Module D1 - Website AI Assist

Branded site chat that answers from the client's approved knowledge (services, FAQs, process).

- Does: Educate, route, escalate, capture consented leads (name/company/email/phone).
- Does not: Invent duty %, bound prices, fake ETAs, legal advice.
- Tech stack plain words: Server holds AI key; widget is UI; RAG pulls relevant knowledge chunks into the prompt; SQLite stores chats/leads/consent.
- Why sold: Website stops being a dead brochure; serious enquiries become CRM-ready.

Module D2 - Domain lookup tool (India HS / CTH Finder for CHA)

For CHA/logistics: India CTH 8-digit educational recommender over full India tariff index, optionally locked to the firm's own filed desk precedents when goods match.

- Does: Primary code, ruled-out lines, desk memo, docs checklist, ports, handoff to CHA.
- Does not: Replace licensed CHA filing / BoE / Shipping Bill.
- Resell angle: Same pattern = 'your industry catalog + your rules + memo + handoff' for other verticals (insurance codes, parts catalogs, etc.) - needs discovery.

Module D3 - Digests / content machine

Monitor regulator or industry sources (e.g. CBIC/DGFT), summarize into desk-style posts, tag industries, publish to site, email subscribe.

- Does: Authority content without full-time writer; optional quality scoring.
- Does not: Automatic legal advice or auto-change client operations.

Module D4 - Client tracking portal (Phase A)

Public track by container/BL/ref + client dashboard + staff ops console (milestones, docs, charges, dispatch). Seed/desk-updatable data in Phase A.

- Phase A honesty: Works as branded status glass + ops process product.
- Phase B upsell: Live PCS / carrier feeds - separate larger quote.

Pragma Flow package pricing (target closes)

Assist only	Rs 1.25L - 1.75L (floor ~ Rs 1.0L)
Core three (Assist + HS + Digests)	Target Rs 2.5L (band 2.25-2.75L, floor ~2.0L)
Core three + Portal Phase A	Target Rs 4.0L (band 3.75-4.5L, floor ~3.25L)
AI credits / launch wallet	Often separate (e.g. Rs 5k OpenRouter style) + monthly actuals
Optional monthly ops after go-live	Rs 15k - 25k depending scope

Reference client

Neo Logistics - licensed CHA & logistics (Cochin / Chennai). Full three tools built; portal Phase A available. Live on production domain still needs their IT embed + host - demos can be staging/local.

7. Service deep-dive F+G - Deploy, host, retain

Deploy / go-live

Making software reachable on the internet safely: DNS, SSL, reverse proxy, env secrets, admin seed, smoke tests. Client must provide domain access and usually pays host accounts with their card.

- Typical CHR stack example: Cloudflare Pages (frontend), Render (API), managed DB, Resend (email).
- CHA AI stack: Node APIs on VPS/PM2 or similar + reverse proxy paths /api/assistant etc. + widget embed into Django/React site.

Retainer

Monthly fee for on-demand tech support: bugs, redeploys, admin/API issues, minor content or feature tweaks. Cancel with notice (e.g. 30 days). Does NOT include unlimited new products.

CHR example retainer	Rs 4,000 / month
Pragma Flow ops retainer band	Rs 15,000 - 25,000 / month

8. How business is actually done (sales -> build -> money)

Stage 0 - Positioning

- We sell outcomes: more recoverable leads, less ops chaos, modern trust, controlled AI.
- We show working demos whenever possible - decks alone convert poorly.

Stage 1 - Outreach

- Identify decision maker (owner, MD, IT head, ops head).
- Short message + offer demo of the matching product line.
- Do NOT dump full pricing wall first; book a discovery call.

Stage 2 - Discovery (30 min)

- What is broken today (WhatsApp, lost CVs, static HS fights, silent website).
- Who uses what tools; existing domain / host / CRM.
- Must-have in 60 days vs wishlist.
- Budget signals and who signs.
- Take notes; map to service letters A-G.

Stage 3 - Demo

- Only demo product lines you diagnosed. Keep under 40 min + Q&A.
- Always state Phase A vs Phase B if portal/integrations involved.
- Always state AI refuses inventing liability for CHA products.

Stage 4 - Package + quote

- Founder approves non-standard discounts under floors.
- Send short client proposal (not this full internal PDF).
- Separate AI / hosting actuals explicitly.
- Payment prefer 40% kickoff / 40% staging accept / 20% go-live ready.

Stage 5 - Kickoff

- Collect assets: logo, content, domain access, admin emails, SMTP decision.
- Confirm stack ownership (who pays Cloudflare/Render/OpenRouter).
- Shared chat (WhatsApp/Slack) + single source of scope list.

Stage 6 - Build + staging

- Ship in thin vertical slices (working path, not 8 week blackout).
- Staging URL or local + tunnel for client trials.
- Change-request rule: out of scope = re-quote.

Stage 7 - Handoff + go-live

- IT pack: env example, ports, embed snippet, runbook.
- Smoke checklist; retention of admin credentials properly.
- Offer retainer.

Stage 8 - Expand

- Land and expand: website -> ConnectOS; ConnectOS -> NestOS; Assist -> HS + digests -> portal.
- NestOS trial -> full production modules.

9. Pricing matrix (internal - all lines)

Currency INR. Always get founder sign-off below floors or on custom enterprise.

Website + ConnectOS (CHR style Option 1)	Rs 40,000 one-time
Website + ConnectOS (CHR Option 2)	Rs 25k + Rs 4k/mo
Website rebuild band (general)	Rs 25k - 1.5L+ by scope
ConnectOS standalone add-on band	Rs 12k - 80k by depth
NestOS multi-user trial fee (example)	Rs 12,999
NestOS full production	PHASED - do not freestyle; founder scopes
Pragma Flow Assist only	Rs 1.25L - 1.75L
Pragma Flow core 3 tools	Rs 2.5L target
Pragma Flow + portal Phase A	Rs 4.0L target
AI credits	Pass-through / small launch wallet
Hosting cloud (client)	typically few \$ to tens of \$/mo

Payment language (standard)

- 40 / 40 / 20 for multi-lakh builds.
- 100% up front acceptable on small fixed website packages.
- Trial fees 100% before credentials.
- GST: confirm registration at invoicing.

10. Discovery questions by scenario

Any website / lead capture prospect

- Where do enquiries go today? Email, WhatsApp, nowhere?
- Who follows up and how fast?
- Do you collect CVs or documents?
- Who owns the domain DNS login?

Staffing / recruitment prospect

- Staff aug vs permanent placements vs laaS - which lines?
- Do recruiters live in Excel + Naukri + WhatsApp?
- Any ATS today (Greenhouse etc.)?
- Do managers need proof of activity / utilization?

CHA / logistics prospect

- What % of first contact is 'what's the HS code' / duty / 'where is my container'?
- Do you want leads from website into sales inbox with consent?
- Have you ever been burned by wrong public classification claims?
- Who updates clients today on shipment status?

11. Demo scripts (compact)

ConnectOS (15 min)

- Public form submit test lead -> admin login -> find row -> download CV -> CSV export.
- Close: lost WhatsApp leads die; this is recoverable.

NestOS (25-40 min)

- Recruiter: candidates, Resdex helper, log call, end day.
- Manager/Admin: sign-out review, tasks, analytics, clients/revenue skim.
- Close: three business lines on one OS; trial then production scope.

Pragma Flow (30-40 min)

- Assist quote path + consent form + desk phones.
- HS desk precedent green badge (cashew/clinker).

- Blog post + subscribe chips.
- Portal public track + ops console if in package.

12. Objection handling (all products)

- Just use WhatsApp: WhatsApp is not filterable compliance history, not a shared CRM, not searchable for CV harvest.
- Just use ChatGPT: No brand control, invents answers, no consent pipeline, keys often misused.
- SaaS tools exist: Many generic; weak India logistics/customs / weak Resdex reality. We ship first-party you brand.
- IT will build later: Cool - then buy product acceleration + domain design. Still sells modules.
- Need live tracking day 1: Portal Phase A first; Phase B integrations quoted separately.
- Too expensive: Split packages; floors exist; free rebuilds kill the studio.
- Show live on our domain now: Staging first is normal; production needs their DNS + host.

13. Ready talk tracks

Cold - general

Hi [Name] - I'm with Pragma. We build first-party software for ops-heavy businesses: websites that actually capture leads, recruitment ops systems, and specialized AI desk tools that refuse unsafe answers. Happy to show a working demo if useful.

Cold - staffing

Recruiting teams often run Naukri + Excel + WhatsApp. We built NestOS - ops layer for talent, activity proof, IaaS interviews, and revenue visibility - and ConnectOS if the site loses CVs.

Cold - CHA/logistics

Most CHA sites are brochures. We ship Assist + India HS desk support + customs digests and an optional client track portal - educational tools that protect the licence.

Close skeleton

Package is fixed-scope. Staging acceptance unlocks next invoice tranche. AI/hosting are actuals. IT handoff is included for go-live. Expand modules later.

14. Portfolio snapshot (honest for internal)

- ConnectorsHR: Website + ConnectOS style lead admin - quoting/deploy path documented.
 - HummingBrains / Mani orbit: NestOS product + trial packaging + ops guides + Chrome helper.
 - Neo Logistics: Pragma Flow: Assist, HS desk finder, digests/blogs, client portal Phase A; market site integration path.
 - PragmaOS: Internal foundation for Pragma studio OS - Phase 1 technical. DO NOT sell as client product yet.
- Never invent live production claims. If demo-only, say demo/trial. If partial go-live, say staging + IT remaining.

15. Hard do-NOTs

- Do not send THIS PDF to clients unredacted.
- Do not promise binding HS, duty %, legal conclusions.
- Do not promise live carrier tracking without Phase B sell.
- Do not quote full NestOS from memory without founder.
- Do not put API keys, trial passwords, or client secrets in public posts.
- Do not offer free unlimited features to 'close this month'.
- Do not position portal or NestOS as finished forever products if they are phased.

16. FULL GLOSSARY (plain English for non-tech sales)

If a word is said on a call and you freeze, search this section after. Definitions are practical, not exam theory.

AI (Artificial Intelligence)

Software that can draft answers, classify text, or extract info. We always constrain it with company knowledge and rules.

API

How software programs talk to each other. Forms send data to an API; the admin UI reads from the same API. Clients never need to 'see' the API.

API key

Secret password for a paid service (OpenAI/OpenRouter/Azure). Lives only on SERVER, never in the public website code.

ATS

Applicant Tracking System - software for hiring pipelines (stages, jobs). NestOS covers ops; big brand ATS (Greenhouse) may integrate later.

Azure Document Intelligence (DI)

Microsoft cloud OCR/document reading. Helps turn scanned PDF CVs into text when plain text is missing.

Backend / Server

Hidden software that stores data, checks logins, talks to AI, sends email. Runs on a host like Render or a VPS.

BoE (Bill of Entry)

Import customs filing document in India. HS tool must NEVER replace CHA final BoE judgment.

Browser extension (Chrome helper)

Small install inside Chrome that reads what is on a page (e.g. Naukri Resdex) and sends chosen rows into NestOS.

CBIC

Central Board of Indirect Taxes and Customs - India customs authority; notices feed digests.

CDN

Content Delivery Network - hosting that serves website files fast worldwide (Cloudflare Pages is CDN-like).

CHA

Customs House Agent / licensed customs broker. Highly reputation-sensitive client type.

Cloudflare

Company for DNS, security, and free/cheap frontend hosting (Pages).

Consent (DPDP-aware)

User must agree before we store personal contact data for follow-up. India data protection mindset.

ConnectOS

Pragma product: website form submissions admin inbox + storage + CSV.

CORS

Browser security rule about which website may call which API. Misconfigured CORS = form fails in browser.

CRM

Customer Relationship Management - tracking clients/leads/deals. NestOS includes a light CRM layer.

CSV

Spreadsheet file you can open in Excel. ConnectOS exports leads as CSV.

CTH / HS code

Number that classifies traded goods for customs. India often uses 8-digit CTH.

Database

Organized storage (MySQL, Postgres, SQLite). Without DB, leads do not persist.

Deploy / go-live

Putting software on the internet for real users, not just your laptop.

DGFT

Directorate General of Foreign Trade - India trade policy notices; part of digests source set.

DNS

Settings that say 'this domain name opens this host server'. Client often gates deployment.

Domain

Human website name (example.com). Separate from hosting.

DPDP

India's Digital Personal Data Protection regime (high-level). Reason we stress consent.

Embed (widget)

Paste a small script into a site so Assist chat appears on all pages.

Env / .env

File of secrets and config on the server (API keys, DB URL). Never email publicly.

Express

Popular Node.js framework for building APIs. (Background tech name.)

Frontend

Screens users see.

Guardrails

Rules that stop AI from saying unsafe things (duty %, legal invention). Selling point.

Hosting

Paying a company to run servers 24/7 (Render, VPS, etc.).

Handoff

Giving client IT the package to run themselves with docs and secrets structure.

IaaS (Interview-as-a-Service)

Business line: client pays staffing firm to interview candidates and deliver reports.

JWT

Login token technology - keeps admin session secure after password login.

KB / Knowledge base

Approved written docs the Assist AI is allowed to ground answers on.

Lead

A person/company who raised hand (form/chat) - potential sales target.

Monorepo

One code repository containing multiple packages (Assist API + HS + digests).

MRR

Monthly Recurring Revenue - helpful sales metric for staffing clients.

MySQL / Postgres / SQLite

Database brands. MySQL often ConnectOS; SQLite often local Assist/NestOS demos.

Naukri / Resdex

Big India job portal; Resdex is recruiter search. No full public API - hence our helper.

Neon

Managed Postgres cloud DB example.

NestOS

Pragma recruitment ops platform product.

Node.js

Runtime that lets JavaScript/TypeScript run servers.

OCR

Optical character recognition - reading text from images/scans of CVs.

OpenRouter

Billed gateway that can route requests to OpenAI and other models using prepaid credits.

Pass-through cost

Money spent on vendors that we rebill at cost or client pays directly - not pure Pragma margin.

Phase A / Phase B

Shipping order: usable product first; live external integrations later.

PM2 / systemd

Process managers that keep Node servers running after reboot on a VPS.

Portal

Client login area (vs public website).

Pragma Flow

Name for modular AI/desk suite (Assist, HS, digests, portal).

Production

The real public system. Opposite of local demo.

Proxy / reverse proxy

Nginx or host path that maps public URL path to an internal port (e.g. /api/assistant -> port 8787).

RAG

Retrieval-Augmented Generation - AI answers using retrieved knowledge snippets, not pure imagination.

Rate limit

Cap to stop spam bots from abusing chat/forms.

RBAC

Role-based access control - different menus by job role.

React

Frontend library used for many of our UIs.

Render

Cloud host for backend APIs (common for ConnectOS).

Resend

Modern transactional email API - form notifications.

Retainer

Monthly support fee.

Scope

Exact list of paid deliverables. Change requests outside scope re-quote.

SMTP

Classic email sending protocol (Gmail Workspace apps password or company mail server).

SPA

Single-page app - slick site UX via JS routing.

SSL / HTTPS

Padlock encryption for websites. Required for production.

Staging

Near-production environment for client review before go-live.

Staff augmentation

Placing contractors into client teams for recurring billing.

Talent acquisition

Permanent recruitment with placement fees.

Tunnel (Cloudflare tunnel)

Temporary public URL that points to software on your laptop for demos.

TypeScript

JavaScript with types - how we write robust code. Clients need not care.

UI / UX

User Interface / User Experience - screens and how easy they feel.

VPS

Virtual Private Server - rented Linux machine you fully control.

Widget

Floating chat button component.

WhatsApp Business API

Official programmable WhatsApp (paid / approved). Different from personal WhatsApp chat.

17. Industry terms mini-glossary (clients she will meet)

CHA / Customs Broker

Licensed person/company that files customs docs. High trust bar.

FF / Freight forwarder

Organizes international transport legs, often with CHA.

ICEGATE

India customs portal systems ecosystem (electronically filing).

AEO

Authorized Economic Operator - trusted trader certification mark many CHAs mention.

IEC

Importer Exporter Code - required for Indian importers/exporters.

BL / BoL

Bill of Lading - ocean shipping transport document.

Container number

Unique ID for a shipping container - used in track tools.

Clearance

Getting goods released by customs.

Desk precedent

How THIS firm previously treated a goods line / CTH in filing practice.

Resdex credits

Naukri prepaid credits recruiters spend viewing profiles - NestOS tries to reduce waste.

Placement fee

One-time fee when a permanent hire joins client via recruiter.

Bench

Recruiters/candidates between assignments - operations concept.

18. One-page operating cheat sheet

WE ARE: Pragma - first-party software studio for real-ops businesses.

PRODUCT LINES: Website | ConnectOS | NestOS | Pragma Flow AI suite | Portal | Deploy | Retainer

MATCH: forms lost -> Website+ConnectOS | staffing chaos -> NestOS | CHA trust tools -> Flow | status spam -> Portal

CORE PRICE ANCHORS: CHR Web+OS ~40k | Flow 2.5L | Flow+Portal 4L | NestOS full = founder scopes | Nest trial ~13k

PROCESS: Outreach -> Discovery -> Demo -> Quote -> Kickoff -> Staging -> Handoff -> Retain/Expand

ALWAYS: separate AI/hosting | Phase honesty | no binding duty/HS promises | no secrets in decks

WHEN STUCK: map pain to product letter -> book demo -> founder for custom NestOS or below-floor price

If she remembers only four sentences:

- 1) We sell first-party products, not chat gimmicks.
- 2) ConnectOS catches website leads; NestOS runs staffing ops; Pragma Flow is specialized AI/desk tools.
- 3) Demo working software; quote packages; host and AI cost are transparent.
- 4) Never invent metrics or liability claims; when unsure, ask founder before promising.

End of playbook. Rebuild PDF: `python docs/generate-internal-sales-playbook.py` | Questions and deal exceptions -> founder.
