

Pragma Flow - Briefing for Adithya

Prepared by Pragma for Adithya | Client: Neo Logistics (neologistics.org) | Date: 22 July 2026

Purpose of this note: give you a clear picture of the project so you can brief Neo's IT team and unblock go-live. Use this as your talking script with IT.

1. Goal of this project

Build and put on Neo Logistics' website a set of first-party tools (Pragma Flow) that help importers/exporters and generate better leads - without replacing Neo's licensed CHA judgment.

- Feature 1 - Neo Assist: website chatbot (Neo services + customs education, DPDP consent, lead alerts).
- Feature 2 - Neo HS Finder: India CTH / ITC-HS shortlist tool for Bill of Entry / Shipping Bill prep.
- Feature 3 - AI Customs Digest: daily CBIC/DGFT scan -> plain-English blog posts tagged by Neo industries.
- Next (discussed): client container tracking (Kochi/Chennai ports) + dispatch/invoice document transfer.

Success = tools live on Neo's domain (or clearly linked), IT-stable, and usable by Neo's team and clients.

2. What we are doing right now

- Core three tools are built and running in a local / staging demo (Neo-branded Vite site + 3 Node APIs).
- Demo can be shared via a temporary public tunnel for team review (not yet on live neologistics.org).
- AI layer: moving from Gemini (billing blocked in India for us) to OpenRouter prepaid GPT credits (Rs 5,000 invoice).
- HS Finder needs stronger 'primary recommendation' UX + tariff catalog fixes where Neo desk codes are missing.
- Customs Digest uses draft -> approve before public blog; scrapers for CBIC + DGFT are working.
- Commercial: AI credits invoice issued; full build fee and tracking add-on still to be contracted.

3. What we are going to do next

1. Turn on live GPT via OpenRouter once credits payment is confirmed; re-verify Assist + Digest + HS ranking.
2. Harden HS Finder: primary CTH recommendation + reasoning; refresh India tariff lines using Neo's missing-code list.
3. Hand IT a clean embed pack: widget script, nginx/Django proxy paths, env checklist.
4. Support go-live on staging then production with Neo IT.
5. After core live: scope Phase A client tracking + document transfer (ops-updatable first; auto feeds later).

4. What still needs to happen (joint checklist)

- Confirm OpenRouter AI credits payment (Pragma invoice INV-2026-001, Rs 5,000).
- Agree commercial scope + milestones for core 3 tools (and tracking if in this phase).
- Neo IT: provision Node hosting (or approve Pragma-hosted APIs) for ports 8787 / 8790 / 8791 (or equivalent).
- Neo IT: reverse proxy on neologistics.org - /api/assistant, /api/hs, /api/notifications (+ /widget static).
- Neo IT: paste Neo Assist embed snippet into Django base template (or mount on React rebuild).
- Neo IT: add/replace pages for HS Finder and Blogs/digest feed (or deep-link to approved URLs).
- Neo ops: who approves digest drafts daily; who owns lead emails from Assist.
- Privacy policy URL for consent text; SMTP for lead / handoff emails if required.
- CORS + HTTPS + keep Node processes alive (systemd / PM2 / container).

5. What YOU (Adithya) need to do specifically

Your role: bridge Pragma <-> Neo IT. You do not need to write code. You need to get clear answers and owners so go-live is not stuck.

A. Before the IT meeting - prepare

1. Share this PDF + the demo link with IT so they see what already works.
2. Confirm with leadership: which tools are approved for this phase (3 core only, or tracking too).
3. Ask Pragma for the latest embed snippet + proxy checklist (one page) if IT wants it in writing.

B. Ask Neo IT these questions (write down answers)

1. Can we run 3 Node/Express services on Neo's server (or a small VPS Neo controls)? If no, can Neo allow Pragma-hosted APIs with CORS?
2. Who owns nginx/Django templates and can add reverse proxies this week?
3. Preferred path: embed on live Django site, or ship via Neo React rebuild first?
4. Staging URL available? (e.g. staging.neologistics.org) - strongly preferred before production.
5. SMTP: can Assist send lead mails to customer-care@neologistics.org from Neo's mail?
6. Any security review / change window / freeze dates we must respect?
7. For tracking later: any existing PCS / shipping-line / internal TMS we must integrate with?

C. What to request from IT (action items)

- Assign a named IT owner + WhatsApp/email for Pragma for 2 weeks of cutover.
- Create staging + production proxy routes (table below).
- Add Assist widget to site footer/base layout.
- Open firewall outbound HTTPS for AI provider (OpenRouter / OpenAI) from the API server.
- Confirm SSL and that API paths are same-origin where possible (best for cookies/CORS simplicity).

D. After the IT meeting - send Pragma

- IT owner name + contact.
- Hosting decision (Neo server vs Pragma-hosted APIs).
- Staging URL timeline.
- Any blockers (security, budget for VPS, Django access delays).
- Target go-live date for core 3 tools.

6. Technical cheat-sheet for IT (share this)

Three backend services + one front-end surface:

- Neo Assist API - default port 8787 - proxy example: `/api/assistant/` -> `http://127.0.0.1:8787/api/assistant/`
- Neo HS Finder API - default port 8790 - proxy: `/api/hs/` -> `http://127.0.0.1:8790/api/`
- Notifications Digest API - default port 8791 - proxy: `/api/notifications/` -> `http://127.0.0.1:8791/api/`
- Widget static: `/widget/neo-assist.js` + `neo-assist.css` (from Assist host) with `data-api-base` = API origin.
- Env secrets stay server-side only (never in browser): OPENAI/OpenRouter key, DIGEST_ADMIN_TOKEN, SMTP.
- Daily jobs later: scan notifications; optional digest approve; retention job for Assist.

7. Boundaries (say this clearly to IT)

- Tools are assistive. HS codes are shortlists - Neo CHA confirms before filing.
- Digest posts are awareness summaries - not official CBIC/DGFT text.
- Assist must not invent duty percentages or prices.
- Pragma delivers software + cutover support; Neo IT owns production servers/DNS/Django access.

8. Contacts

- Pragma: 26pragmalabs@gmail.com
- Neo public contacts already in product: customer-care@neologistics.org | docschennai@neologistics.org

Adithya - if IT only has 15 minutes: show the demo, hand them section 6, get a named owner and a staging date. That is enough for Pragma to move.
