

Pragma Flow - Commercial Proposal

Prepared for: Neo Logistics (neologistics.org)
From: Pragma | Package: 3 website AI features
Currency: INR | AI API usage billed separately

1. What Neo gets

- Three production tools built for a licensed Indian CHA / freight forwarder - not a generic chatbot SaaS.
- Feature 1 - Neo Assist: site chatbot grounded in Neo's services + customs education, with DPDP consent and lead alerts for serious enquiries.
 - Feature 2 - Neo HS Finder: India CTH / ITC-HS 8-digit shortlist tool (12,000+ lines) for Bill of Entry / Shipping Bill prep. CHA confirms before filing.
 - Feature 3 - AI Customs Digest: daily CBIC/DGFT scan -> plain-English summary -> industry tags -> Neo blog (human approve before publish).

2. How this benefits Neo as a company

- Concrete business outcomes - not vanity tech:
- More qualified website leads: Assist captures serious / high-volume enquiries (with consent) and flags them to customercare - instead of visitors bouncing without contacting you.
 - Faster pre-clearance conversations: HS Finder lets importers/exporters arrive with a shortlist already prepared - Neo's CHA team spends less time on first-pass education.
 - Authority and retention content: Digest keeps /blogs alive with India-relevant customs/DGFT updates tagged to Neo industries (cashew, steel, chemicals, agro, seafood, etc.) - without a full-time content writer.
 - Differentiation vs other Kochi/Chennai CHAs: most competitors have a static brochure site. Neo gets three working tools that prove domain competence.
 - Controlled risk: no invented duty percentages, no binding classification claims - designed to protect Neo's licence reputation while still helping clients.
- Rough ROI framing: one incremental freight / clearance engagement recovered through the chatbot typically outweighs this entire build fee. The tools are lead + trust infrastructure.

3. Recommended pricing (best-value for this scope)

Market context: a single custom RAG chatbot in India commonly quotes Rs 1.5L-5L. This proposal covers three features at a fair studio rate - not agency enterprise markup.

A. AI go-live setup (Gemini credits + wiring)	Rs 5,000
<i>One-time. Launch credits + key setup + verify all 3 features on live AI.</i>	
B. Pragma Flow build (Features 1 + 2 + 3)	Rs 2,25,000
<i>One-time. Build, staging demo, IT handoff pack, one CHA content review round, go-live support.</i>	
C. Monthly ops retainer (optional, recommended)	Rs 20,000 / month
<i>Digest review/approve, KB tweaks, health checks, minor fixes. Cancel with 30 days notice after 3 months.</i>	
D. Ongoing Gemini / AI usage	At actual cost
<i>Pass-through to Neo (typically a few hundred to a few thousand Rs/month at pilot traffic). Not bundled into B or C.</i>	

Recommended total to start: Rs 2,30,000 (A + B)

Then optional C (Rs 20,000/mo) after go-live + D as incurred.

4. Payment schedule

- AI setup (A): 100% on approval - Rs 5,000.
- Build (B): 40% kickoff (Rs 90,000) -> 40% staging accepted (Rs 90,000) -> 20% go-live / ready-for-IT sign-off (Rs 45,000).
- If Neo IT scheduling delays go-live after Pragma delivery, final 20% is still due on 'ready for IT' acceptance.
- Retainer (C): billed monthly from go-live month.
- AI usage (D): monthly invoice of actuals, or Neo's own Google billing.

5. What is included / not included

Included in Rs 2,25,000

- All three feature codebases, Neo branding, disclaimers, staging demo.
- Embed snippet + proxy notes for Neo IT (Django / nginx).
- One review pass with Neo CHA on sample answers / HS framing / digest tone.
- Neo IT server time, DNS, SSL, Django template changes (Neo's team / hosting).
- Gemini / LLM API spend (line D).
- Major new features after sign-off (change order).
- WhatsApp bot, ERP/CRM deep integration, multi-language launch (future options).

Not in

6. Why this number is fair

- Under typical India agency quotes for one RAG chatbot alone.
- Pays for domain work (CHA guardrails, India CTH index, CBIC/DGFT pipeline) - not a ChatGPT iframe.
- Transparent: AI credits never hidden inside mystery AI fees.
- Retainer is optional - Neo can self-operate digest approve if preferred.

7. Simple commercial summary

Item	Amount	When
AI go-live setup	Rs 5,000	Now / before live AI demo
Pragma Flow build (3 features)	Rs 2,25,000	40% / 40% / 20% milestones
Ops retainer (optional)	Rs 20,000/mo	After go-live
Gemini usage	Actuals	Monthly

8. Acceptance

This document is a commercial summary for discussion. A short work order / invoice will confirm milestones and payment details. AI usage remains Neo's infrastructure cost.

For Neo Logistics: _____

Date: _____

For Pragma: _____

Date: _____

Disclaimer: Features provide educational assistance only. Neo remains responsible for licensed CHA advice, filings, and client relationships. HS shortlists are not binding classifications. Digest posts are not official CBIC/DGFT text.
